

Parko Class Action

Settlement Class Allocation Plan

The Parties have agreed to allocate the Total Settlement Fund to the Members of the Settlement Class who submit timely valid claim forms with supporting documentation (“Qualifying Claimants”) according to a number of points based on agreed-to factors. The Allocation Plan assumes that there were two residents per household for the entire Settlement Time Period (1986 to the present, or 31 years).

The agreed-to factors are the following:

- The period and length of occupancy on the Settlement Class Area property;
- The period and length of ownership of the Settlement Class Area property;
- The type of property (residential, commercial, other);
- If residential, the assessed value of the Settlement Class Area property;
- Whether the property is located within the 1Q2012 Groundwater Contour; and
- Whether the ownership or occupancy of the Member of the Settlement Class ended before March 2007.

The values for each of these factors is set forth in this chart:

Ownership Factors	Points
Owner of property located on 1Q2012 5 ppb Groundwater Contour	10
Owner of residential property with assessed value at or above \$25,000	45
Owner of residential property with assessed value below \$25,000	35
Owner of commercial property	15
Owner of other type of property (<i>e.g.</i> , vacant lot, miscellaneous residential)	10
Additional Occupancy Factor	Points
Occupier of property located on 1Q2012 5 ppb Groundwater Contour	10
Occupier of residential property in Settlement Class Area	10

Owner-occupiers who submit timely valid claim forms with supporting documentation for each property and/or parcel claimed will receive points based on ownership and points based on occupancy, with both amounts added for a total settlement award. Under the allocation plan, each year between 1986 and March 2007 will be given a weight of 1, and each year between April 2007 and the date of service of the Class Notice will be weighted by a factor of 4. The weighted duration of ownership and occupancy will be used to allocate the points for a particular property to an owner or occupier who was present for less than the entire Settlement Time Period.

For example, a person who has owned and occupied a residential property located on the 1Q2012 5 ppb Groundwater Contour with an assessed value greater than \$25,000 for the entire Settlement Time Period (100%) will receive 75 points ($75 = 10$ (Owner on 1Q2012 Groundwater Contour) + 45 (Assessed value >\$25,000) + 10 (Occupant on 1Q2012 Groundwater Contour) + 10 (Occupant of residential property)). On the other hand, if that person owned and occupied the same property for 50% of the weighted duration instead of the entire Settlement Time Period, he or she would receive 50% of the designated points (*i.e.*, 75 points times 50% equals 37.5 points).

Once all claims have been received, evaluated and approved, the Claims Administrator will add up the total number of points allocated to the Qualifying Claimants, and will compute the dollar value of each point by dividing the Distributable Amount of the Total Settlement Fund by the number of allocated points. The Claims Administrator will then compute the amount to be awarded to each Qualifying Claimant by multiplying his or her total number of points times the dollar value of each point.
